

SBOX-X Quick Guide

Content:

- 1) Sbox-X
- 2) 2 eSATA 1 meter cable
- 3) 1 power cable
- 4) Bag of screws

Sbox-P Quick Reference

- 1) Remove the SBOX from its packaging.
- 2) Slide the bottom, handle will semi-reject, then remove the tray.
- 3) Remove the support rail and secure HDD to the removable tray, and then put it back into the case.
- 4) Use the 2 meter eSATA cable to connect the SBOX to the eSATA port on your computer.
- 5) Install the Java SATARaid utility that can be found in the driver CD under GUI folder of your specific SATA host controller. (refer to the manual on how to setup you raid or jbod)
- 6) You should be able to see the drive(s) in disk management once you setup your raid or jbod. (In window 2K and XP, right click on my computer, manage and then click on disk management.)
